

Web appendix to “Chapter Five: Academic achievement, tracking decisions and their relative contribution to educational inequalities: Change over four decades in France”

Mathieu Ichou & Louis-André Vallet

Table A. Factors explaining secondary effects at transition 2' (age 15, 1984 cohort)

Variable	Coefficient	P-value	Portion of secondary effects explained (%)
Family's official choice of track	0.308	0.000	93.5
Parental assessment of academic level	0.010	0.000	3.1
Useful degree for job	0.001	0.688	(0.4)

Source: 1995-2006 Panel study; our calculations.

Table B. Factors explaining secondary effects at transition 3' (age 18, 1984 cohort)

Variable	Coefficient	P-value	Portion of secondary effects explained (%)
Type of baccalauréat	0.026	0.000	22.3
Job allowing to travel	0.002	0.287	(1.9)
Job close to home	0.001	0.646	(0.6)
Job allowing to meet people	0.001	0.341	(0.6)
Secure job	0.001	0.822	(0.6)
Captivating job	0.000	0.638	(0.4)
Financially profitable job	0.000	0.931	(-0.01)
Job allowing free time	-0.003	0.102	(-2.2)
